DR. ANTHONY FAUCI ?!

OCTOBER 2008 ?!?!?

Predominant Role of Bacterial Pneumonia as a Cause of Death in Pandemic Influenza: Implications for Pandemic Influenza Preparedness

David M. Morens, Jeffery K. Taubenberger, and Anthony S. Fauci

National Institute of Allergy and Infectious Diseases, National Institutes of Health, Bethesda, Maryland

Abstract

Background—Despite the availability of published data on 4 pandemics that have occurred over the past 120 years, there is little modern information on the causes of death associated with influenza pandemics.

Methods—We examined relevant information from the most recent influenza pandemic that occurred during the era prior to the use of antibiotics, the 1918–1919 “Spanish flu” pandemic. We examined lung tissue sections obtained during 58 autopsies and reviewed pathologic and bacteriologic data from 109 published autopsy series that described 8398 individual autopsy investigations.

Results—The postmortem samples we examined from people who died of influenza during 1918–1919 uniformly exhibited severe changes indicative of bacterial pneumonia. Bacteriologic and histopathologic results from published autopsy series clearly and consistently implicated secondary bacterial pneumonia caused by common upper respiratory–tract bacteria in most influenza fatalities.

Conclusions—The majority of deaths in the 1918–1919 influenza pandemic likely resulted directly from secondary bacterial pneumonia caused by common upper respiratory–tract bacteria. Less substantial data from the subsequent 1957 and 1968 pandemics are consistent with these findings. If severe pandemic influenza is largely a problem of viral–bacterial copathogenesis, pandemic planning needs to go beyond addressing the viral cause alone (e.g., influenza vaccines and antiviral drugs). Prevention, diagnosis, prophylaxis, and treatment of secondary bacterial pneumonia, as well as stockpiling of antibiotics and bacterial vaccines, should also be high priorities for pandemic planning.

“If grippe condemns, the secondary infections execute” [1, p. 448].

—Louis Cruevilhier, 1919

Influenza pandemic preparedness strategies in the United States [2] assume 3 levels of potential severity corresponding to the 20th century pandemics of H1N1 “Spanish flu” (1918–1919), H2N2 “Asian flu” (1957–1958), and H3N2 “Hong Kong flu” (1968–1969), which were responsible for an estimated 675,000 [3], 86,000 [4], and 56,300 [5] excess deaths in the United States, respectively. Extrapolation from 1918–1919 pandemic data to the current population

**Oh mio Dio
di Anna Von Reitz**

Nel 2008, il dott. Anthony Fauci è stato coautore di un articolo sull'epidemia di influenza spagnola che viene classificata come la pandemia moderna più devastante. Ha travolto l'intero pianeta sulla scia della prima guerra mondiale e ha causato milioni di morti.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2599911/>

Quindi, studiando questa grande e reale pandemia, cosa hanno scoperto il dottor Fauci e i suoi colleghi?

Hanno scoperto che la maggior parte delle vittime dell'influenza spagnola non è morta di influenza spagnola. Sono morti di polmonite batterica. E la polmonite batterica è stata causata da... aspetta, aspetta... indossando maschere.

L'intenzione allora, come oggi, era quella di fermare la diffusione della malattia indossando le mascherine, ma quello che in realtà è successo è che si è creata inconsapevolmente una pandemia "inosservata" di polmonite batterica.

E il dottor Anthony Fauci lo sa, perché ne ha scritto nel 2008.

Pensaci la prossima volta che vedi un contenitore della spazzatura traboccante pieno di maschere usate --- o trovi una maschera usata incastrata nel carrello della spesa o semplicemente sdraiata come un pannolino sporco nel mezzo di un parcheggio.

Un enorme rischio per la salute pubblica e la minaccia di una pandemia non virale di polmonite batterica viene favorita dall'uso di maschere e il dottor Anthony Fauci lo sa.

Lo sapeva almeno dal 2008.

Eppure, si siede lì mamma come un ceppo.

Mai sentito parlare di omicidio colposo?

Dobbiamo porre fine a questa situazione ea qualsiasi autorità conferita a quei privati che la promuovono. Adesso.

"They discovered that most of the victims of the Spanish Flu *didn't die from the Spanish Flu. They died from bacterial pneumonia. And the bacterial pneumonia was *caused by*.... wait for it, wait for it... *wearing masks*.*

The intention then, as now, was to halt the spread of the disease by wearing masks, but what actually happened was that an "unobserved" pandemic of bacterial pneumonia was unwittingly created instead.

And Dr. Anthony Fauci knows this, because he wrote about it in 2008.

A huge public health hazard and the threat of a non-viral pandemic of bacterial pneumonia is being fostered by the use of masks and Dr. Anthony Fauci knows it.

He has known that since at least 2008.

And yet, he sits there mum as a stump.

Ever heard of **negligent homicide**?

We need to put an end to this situation and an end to any authority vested in those private individuals promoting it. Now.

GRANDI RAGAZZI DEEP STATER!!!

COS'E' IL DOTT. ANTHONY FAUCI CHE FA QUI CON ... BILL GATES SR., GEORGE SOROS, BARBARA WALTERS, BROOK ASTOR (FAMIGLIA ASTOR), IL FONDATORE DELLA CNN TED TURNER, DAVID ROCKEFELLER, TOM BROKAW..... ..
